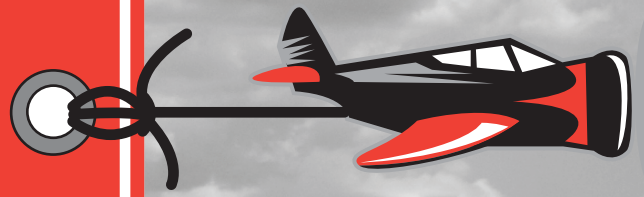
INTERNATIONAL AG LABS
A BIOLOGICAL APPROACH TO AGRICULTURE

PLEASE JOIN US

4TH ANNUAL FIELD DAY!

Tuesday, August 21, 2012



Featured Speaker: Lee French, Entomologist - French Agriculture Research

Lee French, founder and owner of French Agricultural Research has been raising corn insect pests for scientific research for approximately three decades. Most likely the corn hybrids and pesticides used on your farms were tested using insects raised in French's lab located in Lamberton, MN. In 2009, French made the prediction that the corn rootworm would overcome the Bt gene reducing its effectiveness which proved true. Join us as we learn more about the intricate details necessary to raise corn pests as well as what we can expect in the future.

Tuesday, August 21, 2012
10 a.m. – 3 p.m.

Fairmont Knights of Columbus Hall
920 E 10th Street
Fairmont, MN 56031

Register by August 17: $20
