The 3rd annual Field to Plate seminar is a joint venture between BRT Ag & Turf of Ladora, Iowa and FHR Farms of Rochester, Minnesota. The seminar is designed to bring production agriculture and the American consumer together.

The seminar is designed to bring farmers together to educate and instruct them on innovative ways to increase soil structure, while benefiting yields. Consumers join in to provide an understanding when proper principles are used, the issue of yields becomes secondary to the impact they have on the market place. The benefits of this understanding are tremendous. Both agriculturalists and consumers meet and gain mutual respect for one another, while allowing a free flow of information. The farmer can take this information back to the farming operation not only to develop soil quality, but build healthy soil for healthy food and healthy consumers.
